KLEESCHULTE
WESTFÄLISCHE ÖLMÜHLE

For generations – conserving and using resources sensibly

The company

Our actions are orientated in every possible way towards sustainability of the used raw materials and the products with which we operate. We store, refine, process and trade only products that originate from natural or renewable systems.

Our daily ambition is to always be one step ahead of the market through innovation and competence. Being flexible and efficient for our partners is also an important pillar of positive development. The groundwork for the present-day company was laid with a grain mill, already three generations ago. Today we are a strongly diversified medium-sized family enterprise with 60 employees.

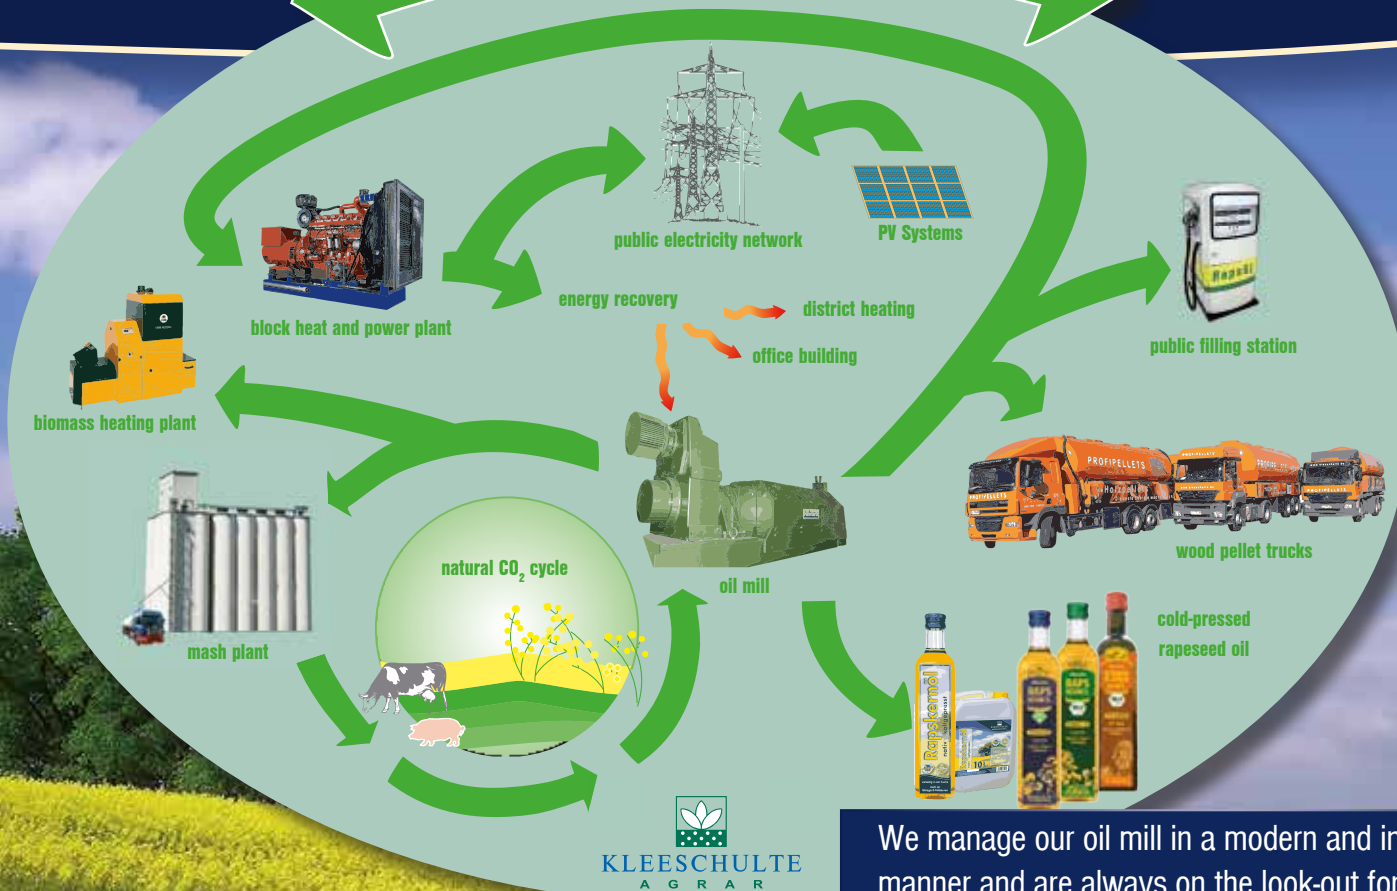

The energy cycle (see the figure on the right) of our company illustrates the versatility of this ecological commitment. The individual areas interlock and in doing so form the natural cycle based on sustainable raw materials.

Our oil mill

Our belief: Everything from one source – from storage to bottling popular oils. This way we maintain the best quality in a single holistic production process.

Energy Circuit company Kleeschulte, Büren

We manage our oil mill in a modern and innovative manner and are always on the look-out for new ideas. In doing so we place the greatest emphasis on quality, stability and are always looking to the future for new ways to develop the company.

WESTFÄLISCHE ÖLMÜHLE

Principle behind our actions: Quality requirement

Our buying of raw materials, our quality controls, the storage and processing are all aligned with the highest demands of the sector. We use state of the art technology during production. With the introduced quality management systems, all the process steps are monitored by independent testing centres. We explore new technology to constantly improve our processing and product quality.

And above all, we place emphasis on the expertise and positive attitude of our employees.

We are committed to quality and care during the selection of raw materials and the production of food stuffs.

Sustainable handling of raw materials

Raw material, trade & storage

The handling of bulk goods, such as oil seeds and cereals, has been our daily business for many generations. Our enthusiastic team guarantees a rapid and reliable transaction. Modern powerful conveyor technologies ensure fast handling of the goods flow. In this way, we are able to store and process up to 50.000 t oilseeds in Büren, for example.

Responsible handling of raw materials

The rape harvest for oil production is processed and stored directly with us. We are able to ensure the excellent quality of the rape seed thanks to our many years of experience in processing and refining rape.

We will meet the high demands on the products in accordance with the EC rules for organic farming EC 889/2008 in the first professional organic-warehouse in Westphalia. We founded this separate location in 2009 and installed a second organic oil-production.

Trade

Wholesale of oil seeds has been part of the core business of our company for decades. We negotiate every type of forward and flexible forward contract with our customers. The transparent contract design, the high degree of reliability and the flexibility in the implementation of the contracts create security throughout the trade chain.

Our commitment is characterised by fast decisions and competent goods handling. The storage and trade of raw materials take place with awareness of the need to sustainably protect the environment and to use it responsibly.

Bottling plant

Oil extraction

To be able to produce rapeseed cooking oil, the rape seed is initially subjected to a 3-fold cleaning process in the oil mill. It is then peeled off. In the gentle cold pressing process, the golden rapeseed oil is extracted from the kernel of the black seeds. We do this very carefully to ensure that the press cannot press the oil out of the rape seeds too quickly. In this way, the valuable contents of the rape seed oil are maintained. Special filters are used with a precise fine adjustment to achieve the desired oil purity. At the same time, our oil remains free of genetically modified ingredients, preservatives and other additives. After an extensive and certified test, the oil enters the edible oil bottling plant. Since March 2013 we have a new state of the art bottling plant. This means we are able to produce a volume of approx. 10 million bottles per year.

Trademarks

For trademarks and our own trade brands we produce individual rapeseed cooking oil, which is decanted into bottle volumes of 100 ml to 2 litres. Furthermore, barrels of 5 to 15 litres can be produced for filling canisters and containers (1,000 litres).

Even food tanker lorries can be directly filled. We are happy to help you, from individual product design right through to the logistics.

The high quality oils are precisely bottled, capped and labelled in the bottling plant. In the next stage, the bottles are checked and packaged.

Versatility

Rapeseed oil is the most bought cooking oil in Germany. Whether at home, in restaurants or in the canteen - people who cook aim to serve healthy and tasty dishes. Moritz rapeseed oil is an integral part when a fresh salad is being served and meals are being carefully prepared. Furthermore, the exemplary fatty acid composition of our rapeseed oil supports a balanced diet.

Rapeseed oil is a good choice as it is cold pressed and virgin, and rich in cholesterol-reducing linoleic acid. This means, a dessert spoon of high-quality vegetable oil provides the daily requirement of the important “protective vitamin E”.

Benefits of Moritz rapeseed oil

- premium quality
- cold pressed and virgin from the first pressing
- rich in omega-3 and other unsaturated fatty acids
- without genetically modified ingredients and additives
- made in Germany
- excellent price-performance ratio
